

THERMORY NORDIC PINE CLADDING

A unique, rustic and cost-effective cladding. Thermory Nordic Pine is Scots Pine from Northern European forests and has been thermally modified by the worlds largest modifier, Thermory.

Nordic Pine is an attractive brown colour throughout the full thickness of the timber, which naturally ages to a silver-grey. The original colour and tone can be preserved with a quality penetrating oil, or alternatively stained darker with a tinted oil.

Natural characteristics of Thermory Nordic Pine include rustic butterfly knots and sound tight knots giving each board its own unique personality.

- 15 year warranty
- Stable hardwood
