LEAVE A LASTING IMPACT

## THERMORY RADIATA PINE CLADDING

From New Zealand's own Radiata Pine forests and thermally modified to exacting standards, Thermally Modified Radiata Pine is a sustainable clear grade alternative solution for cladding and other exterior applications.

The thermal modification process enhances the stability and longevity of the Radiata Pine and it is easily stained with a range of colour tones. The even uniformed grain of the Radiata Pine makes it an attractive cladding option for both residential and commercial projects.

- Stable softwood
- Easily worked
- Lengths: 2.4m – 6.0m
